

Transporting Scuba Equipment

Some scuba gear can be transported on-board the aircraft. Please refer to the guidelines below:

- Regulators, Buoyancy Compensators and mask, snorkel and fins are all acceptable as checked or carry-on baggage.
- A compressed gas cylinder is allowed in carry-on or checked baggage **ONLY** if the regulator valve is completely disconnected from the cylinder and the cylinder is no longer sealed (i.e. the cylinder has an open end). The cylinder must have an opening to allow for a visual inspection inside. TSA Security Screeners will NOT remove the seal/regulator valve from the cylinder at the checkpoint. If the cylinder is sealed (i.e. the regulator valve is still attached), the cylinder is prohibited and not permitted through the security checkpoint, regardless of the reading on the pressure gauge indicator. TSA Security Screeners must visibly ensure that the cylinder is completely empty and that there are no prohibited items inside.
- Knives and tools are prohibited from carry-on luggage. These items should be packed in checked luggage. Any sharp objects packed in checked luggage should be sheathed or securely wrapped to prevent injury to baggage handlers and security screeners.
- Spear guns are prohibited from carry-on luggage. These items should be packed in checked luggage.
